

Exquisite homes like these demand serious wood protection.

Natural Oil Wood Finishes

NATURALLY TOUGH OIL FINISH

A specialized professional wood finish, Timber Pro UV is used by many of the most prestigious Log Home Builders, Cedar Home Manufacturers, and Timber Framers in North America. Timber Pro UV is durable, easy to apply, and easy to maintain. Serious wood lovers choose Timber Pro UV because it preserves the beauty and structural integrity of their wood for years to come. Available in "Deck & Fence" formula or "Log & Siding" formula.

UNIQUE AND PROGRESSIVE

This one-of-a-kind finish is made from 100% renewable plant oils, chemically modified into a tough penetrating resin with high-tech mold and mildew inhibitors. It does not bake out of the wood from sun exposure and it is non-flammable. It is one of very few finishes that is oil-based yet it cleans up easily with water. Timber Pro UV is so envirosafe it can even be applied on interior wood surfaces. Also, it is so long-lasting it has become the product of choice for the exterior of structures located in harsh climates such as ski and oceanfront resorts.

Preserve, Protect & Beautify:

- Log Homes
- Decks & Fences
- Wood Siding
- Cedar Homes
- Cedar Shingles
- Shakes

Here are some of our beautiful transparent wood colors:

Oregon Cedar

Natural Gold

Redwood

Woodlands

Light Pine

Weathered Gray

Pinewood

Honey

(Colors shown are approximations. True color is determined by species, texture and porosity of wood.)

Natural Oil Wood Finishes

- **Oil Resin Based, Water Reducible** - High grade plant oils (non-petroleum) are modified into resin. The oil resin penetrates into the wood using water as a carrier. The water in the formula evaporates as the oil resin dries and bonds with the wood fibers. The first coat acts like a sealing primer, helping to lock in the wood's natural extractives.
- **Non-Darkening** - Timber Pro UV does not soften, darken, become sticky, or bake out of the wood; consequently, it does not attract dirt, dust, or pollen.
- **Easy to Apply** - Timber Pro UV can be sprayed and back-brushed saving you time and labor. Our finish cleans up easily with soap and water.
- **Easy to Maintain** - There is no need to strip or sand our finish before applying maintenance coats. Periodic re-application of our Clear UV Top Coat Finish for log and wood siding enables you to protect the color coats underneath, maintaining the clarity of the finish rather than building up color and losing transparency over the years.
- **Environmentally Safe and Non-Flammable** - Timber Pro UV uses water as a carrier so there are no flammable solvents or thinners in our product. Our V.O.C.'s (fumes) are low and our finish is environmentally safe and user friendly.
- **Unseasoned Wood? No problem...** - Timber Pro UV can penetrate fresh wood containing as much as 20% moisture content. Our finish breathes so it does not trap moisture in the wood when applied correctly. It also reduces checking, warping, and cracking because the finish slows the seasoning process of the wood.
- **High-Tech UV Filters and Mildewcides** - We use 3 types of UV filters in our transparent stain: a UV reflector, absorber, and finely ground tints. They are the highest-rated UV filters available. Our top rated fungicides which inhibit mold, mildew and algae are also among the best in the industry.
